

Who Is Team 2035, *The Rockin' Bots?*

We are a FIRST Robotics
Competition Team based out of
Carmel High School in California.
Our team was founded in 2007 by
Paul McFarlin and Tom Clifford.

How Our Team Promotes Safety!

Our Buttons

One way our team promotes safety is by creating buttons to give away at competition that encourage others to be safe. One example of this is our “Safety Is Sexy” button (shown below) that we created last year, which you can collect from us at our pit at CVR. We hope that other FRC teams will join us in creating buttons that foster safety.

This Pamphlet

This pamphlet was made by our team to remind others to stay safe while participating in FIRST.

How Our Team Stays Safe In The Studio!

What Is the Studio?

The Studio is what we call the area where we work due to our team’s rock theme.

Machine Tools

We are extremely cautious when working with machine tools and only allow students to use them after they are taught how to safely use the machine by a mentor or another member. All members are required to take a basic safety quiz at the beginning of year before they can use any of the machine tools. We also try our best to upgrade machine tools with a balance of safety and sustainability in mind.

First Aid Kit

We have a first aid kit in our studio in case someone gets hurt and needs something quickly, like a band aid.

How Our Team Utilizes PPE!

Safety Glasses

Our team provides safety glasses to its members by having a supply of them in our studio for them to use and giving everyone their own pair when we go to competitions. We require people to wear them in our studio when working with powered tools or while doing anything else that may need them.

Gloves

Our team has gloves that we keep in our studio for when anyone needs to use them.
